

WHITE PAPER

**PLAYINGCRYPTO**

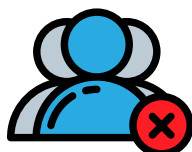

**Innovative Gambling Platform  
On The Ethereum Blockchain**

# INTRODUCTION

Today's gaming market suffers from the crisis of trust between the players and the game organizers. As you are aware of, the organizers of casino games and sports betting resort to manipulating the winnings in order to maximize their profits. The cases of outright refusal to pay out the winnings have become a frequent occurrence.

We offer a fundamentally different gaming platform where the game logic and the amounts of both wagers and wins will be publicly available and the payment of winnings will be automated and will not depend on the organizers.

Our platform will prohibit game organizers from both understating payments and manipulating winnings. This idea will be implemented by publishing the entire game process on the Ethereum network.

As of now, no single gaming system in the world can guarantee the fairness of winnings. The technology that ensures the fairness of payments to players will no doubt be in demand.

## OUR GOAL

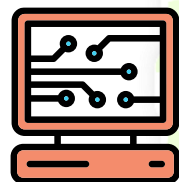

**The goal we set for ourselves is to shift the gaming market into an upright field of activity - more honest than the traditional one and the one of the online Casinos. We are confident that the players will appreciate our idea to the fullest**

We are a team of experienced developers working in the gaming industry since 2008. Over the period of our work we have created hundreds of games for our partners and developed a lot of mathematical algorithms that provide a delicate balance between the players' gambling excitement and the profitability of the system

We possess unique knowledge and experience. Our products are protected from unauthorized access from the outside. The stability of our games' functioning is corroborated by many years of practical experience

We use only modern technologies and comprehend all the subtleties of gambling games development. Since our goal is to completely change the gaming industry, we will undoubtedly complete the project

## OUR POWER

**We offer a powerful gaming platform that will be easily integrated by game content providers via an API (application programming interface).**

We are working on a PLYC token that will serve the entire system. Players will use the PLYC tokens for placing their bets while the partners will be able to buy the PLYC tokens on the exchange or use the PLYC tokens purchased during the ICO. The partners will independently assign the value of the PLYC token for the players.

The game algorithms will be done in the form of smart contracts and uploaded to the Ethereum network. The smart contract code will define the game combinations and calculate the winnings. At that, any player will be able to see the proof that the game combination was generated by a smart contract precisely since it is signed with a unique key

The mathematics of the game wired into the code of a smart contract guarantees the return on the stakes at a strictly defined level. Anyone can open the contract code and verify the honesty of the declared return. Therefore, if the system claims that the return on the game is 90%, it will mean precisely this return value and no person can affect it

Should there be any kind of intervention, all the participants will become aware of them

# OUR FIELD OF ACTIVITY

Black Jack

Lottery

Poker

Roulette

Slot Games

Sports betting

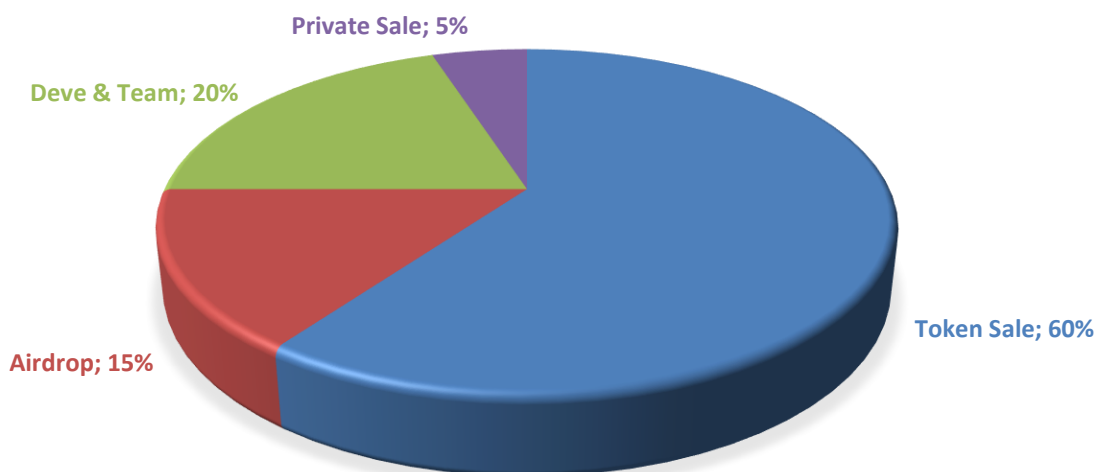

## PLATFORM ADVANTAGES

- ✓ The platform provides support for 3D games
- ✓ The math tested over many years with the guarantee of return rate (RTP)
- ✓ An advanced control panel developed on the basis of the most modern vue.js framework
- ✓ The whole game process takes place outside the Blockchain system which allows for instantaneous moves in the game. There is no more need to wait for the validation of the transactions; only the depositing and withdrawal of funds will be done on the Blockchain base
- ✓ Honesty is guaranteed. Each game move will be generated using Random Number Generator (RNG)
- ✓ The sequence of the game moves will be signed with a unique key and checked by both the client and the server, which will guarantee the security of the game session. The possibility of influencing it from the outside will be out of the question
- ✓ Playing moves are up to 10 times less expensive than those on other platforms (gas cost)
- ✓ A 2-click process of integration into other platforms
- ✓ A fully decentralized technology upon the platform's release
- ✓ It functions on the FWIN base - the token of the FairWin platform. Investors, game developers and partners receive FWIN tokens as compensation
- ✓ An open platform architecture convenient for developers

# TOKEN STRUCTURE

The total number of tokens is 77,000,000,000 PLYC ( seventy-seven billion PLYC )  
PLYC token structure is the following:

## TOKEN DISTRIBUTIONS

Start Public Sale : July 30, 2018

End Sale : August 30, 2018

Max Supply: 77,000,000,000 PLYC

Token Decimals: 18

Exchange Rate: 1 ETH = 7,700,000 PLYC

# ROADMAP

**January 2018**

Preparing ICO & Marketing

**2018**

**February**

Whitepaper Release

**March 2018**

Website Release

**2018**

**June**

Run Airdrop Campaign

**July 2018**

Token Private Sale  
Start ICO Sale

**2018**

**September**

List On Exchange

**October 2018**

Release PLYC Wallet

**2018**

**November**

Mobile App Release

**Q1 2019**

Internal Trans Token Exchange

**2019**

**Q2**

PLYC Go Global
